

HOW TO SET UP A BESPOKE TABLE CLOTH

- 1 Measure your table - **height, width** and **depth**
- 2 To calculate the width of your cloth, add the **height + width + height = Total width**
- 3 To calculate the depth of your cloth, add the **height + depth + height = Total depth**

The cloth will touch the floor on all sides

- 4 Create your canvas size using the width and depth calculated in steps 2 and 3
- 5 To set up the front facing area of your cloth, create a box using the **width** and **height** measurement from step 1. Place this box centrally on the bottom edge of your canvas **This is your front facing area!** Place any logos and key content to be visible on the front of the cloth in this section

- 6 To set up the table top area of your cloth, create a box using the **width** and **depth** measurement from step 1. Place this box centrally and directly above the box created for the front facing area **This is your table top!** Place any logos and key content to be visible on the top of the cloth in this section. The remaining canvas creates the back and sides of your cloth

- 7 Ensure you fill the entire canvas with your required background colour/ pattern. Cloths are printed white as standard.

- 8 Ensure all boxes, guides and template lines are removed from your artwork before submitting your high resolution PDF file for print
Do not add crop or bleed

Allows under table access
